SCOTTISH CARBON COUNTING GROUP

The Scottish Carbon Counting Group has been established to:

- Raise awareness of issues around the need for carbon counting
- Enable individuals and organisations understand, evaluate, adopt and refine effective carbon counting methodologies and targets
- Develop a palette of actions and processes that can be used to reduce carbon emissions and meet targets set in emission reduction action plans
- Provide a robust and user-friendly methodological framework for carbon counting in Scotland to provide an internationally leading edge theoretical foundation on which to build Scotland's Low Carbon Economy
